DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), on July 28, 2000, and February 1, 2002, which papers are now of record in the file.

Specification

2. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-18 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Bauman et al., U.S. 6,457,101.

As explained throughout the reference, Bauman et al. teach a cache coherence mechanism wherein a plurality of caches in a hierarchy are provided with a plurality of controllers and coupled to a memory (*note column 5, lines 19-32 and the control*

circuitry of Figure 3), the controllers operating such that if a CPU request for data is received by a cache, a speculative response is generated and held ready for transfer and a hit decision will be made (i.e., "hit" or "miss"), resulting in a "return request" (note column 6), to either send the held speculative data response to the CPU or to discard the held speculative data, accordingly (*note columns 5 and 6*).

As for the broadly claimed n-way associative cache, this limitation would have been taught by any cache (i.e., from an n=0 non-associative cache to a fully associative cache).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Peikari whose telephone number is (703) 305-3824. The examiner is generally available between 11:00 am and 9:30 pm, EST, Monday through Thursday.
